822 Heat and Air Expands Commercial HVAC Service Across the DFW Metroplex

August 21, 2026

Benbrook, TX - August 21, 2026 -
822 Heat and Air has expanded its commercial HVAC installation and air conditioning repair services to better serve businesses throughout the Greater Dallas-Fort Worth Metroplex and surrounding suburbs. The expansion broadens access to full-scale heating and cooling solutions for commercial property owners across communities including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, and Dallas.

The expanded offering focuses on complete commercial HVAC installation for large-scale facilities, along with repair and ongoing maintenance. As demand for reliable climate systems continues to grow across the region, the company has increased its capacity to handle central air systems, rooftop units, split systems, ventilation solutions, ductwork design, heat pump systems, chiller systems, and building automation systems.

Commercial buildings depend on properly functioning climate systems to maintain productivity and comfort, and aging equipment often reaches a point where continued repairs become less practical than a full

upgrade. The company now provides comprehensive hvac replacement commercial services designed to help businesses transition to newer, more energy-efficient systems that reduce operational costs.

David, a spokesperson for 822 Heat and Air, said the expansion responds to steady growth in commercial demand across North Texas. "Businesses across the region have been looking for a contractor that can handle everything from the initial consultation through installation and long-term maintenance," David said. "Expanding these services allows the team to meet that need with a single point of accountability, whether a facility requires a new rooftop unit or a complete system overhaul."

The company's certified technicians perform each installation with an emphasis on precision, energy efficiency, and system longevity. Energy-saving solutions remain central to the company's approach, helping commercial clients lower utility expenses while reducing environmental impact. Support extends from the first assessment through post-installation service, giving property managers ongoing access to maintenance and repair.

For businesses in and around Johnson County, the addition of cleburne commercial hvac service reflects the company's continued investment in areas outside the immediate Fort Worth core. Serving these communities directly allows for faster response and localized support for commercial clients.

"The goal is to deliver dependable commercial hvac systems that keep facilities running without interruption," David said. "Every project is approached with the understanding that downtime affects a client's operations, so the work is done efficiently and correctly the first time."

Along with its commercial work, 822 Heat and Air continues to provide residential HVAC services, ductwork installation and repair, and AC tune-up services for homeowners throughout its service areas. Financing options are available subject to credit approval and offer eligibility, with terms arranged directly between the customer and the chosen finance company.

822 Heat and Air is a heating and air conditioning contractor based in North Texas, providing both commercial and residential services. The company specializes in complete HVAC installation, repair, and maintenance for large-scale commercial facilities and residential homes. Operating throughout the Greater DFW Metroplex and suburbs, the company holds Texas license number TACLA65080C and emphasizes energy-efficient, technician-driven solutions built around each client's needs.
